

Folks,

Please find below the BOM for the newly formed SOU SD-45 list group project. This list was formed by looking at prototype photos and trying to figure what could be added to the Kato SD-45 to make it a nicer, more prototypical model for our collections and one that we would be proud to build and own.

One of the pitfalls of producing one of these Internet group projects as we go is that we sometimes find that changes and additions have to be made to the original BOM and this list and project could very well fall in this category. I ask for your patience and understanding while we proceed through the different stages of building the SD-45 especially if we run into changes that need to be made. I will attempt to stay a step ahead of the group and hopefully I can correct any changes before they appear on your screen.

For those of you that have never participated in one of these Internet group projects, I welcome you aboard and I'll attempt to explain how it works. Each step of the project will be sent to the group along with a high quality scan of the actual model being built. These steps will be numbered 01- however many it takes to complete this model. Some steps will have sub steps, i.e., 02A, 12B. Each sub step will also include a scan to make building the model easier make each step easier to understand.

I encourage each and ever member to ask questions pertaining to the project. I am by no means an SD-45 expert or an expert modeler and I realize there are details that may be missed or steps that can be corrected and made easier.

Hopefully, we can begin work on this model next week so this gives some of you the opportunity to purchase the locomotive or the detail parts needed to complete this unit.

If any of you think the project is moving too fast, please contact me on line since there may also be others that have the same idea as you.

Bob

Southern SD-45 3107A

Qty.	Manufacturer	Part no.	Description
1	A-Line	29200	W/S wipers
1	Athearn	46031	GP-38-2 no. boards
1	Cannon & Co.	HN-1101	HH kit
1		SB-1201	35/40 series sub-base
1		FS-1304	Inertial Filter Screens
